Approved Distributor

AJ Etheridge
& Co Inc.

Three Stage Operation

Stage 1 - Solids Removal

Wastewater from the kitchen is directed into the Grease Guardian, where a removable strainer basket positioned above the water level, filters out solid debris.

Stage 2 - Grease & Oil Separation

Grease in the wastewater floats to the surface and is trapped while the clear water leaves the unit and enters the drainage system.

Stage 3 - Self Cleaning & Grease Removal

The heating element is activated on a controlled time basis to liquefy the grease, which is then removed by the internal skimming drum and deposited into a portable container for recycling.

After Sales On-line Asset Management Program

Grease Guardian have developed a unique on-line asset management program for tracking the status of all installations. This on-line program is available to all customers, distributors, restaurant chains, and service partners etc, with varying levels of access.

Grease Guardian World electronically stores operation & maintenance manuals, service reports, google map locations and installation photos. All this information can be accessed and monitored from the convenience of your smart phone, tablet or laptop.
